Dear Hiring Manager,

I am writing to express my interest in Software Engineering, AI/ML, Backend Development, or Generative AI opportunities within your organization.

I am currently pursuing a Bachelor of Engineering in Computer Science with a specialization in Artificial Intelligence and Machine Learning at Maharaja Institute of Technology. Throughout my academic journey, I have focused on building practical software solutions that combine backend engineering with modern AI technologies. My experience includes developing production-ready REST APIs using Django and PostgreSQL during my internship at Polygnan Foundation, as well as building AI-powered applications using Python, FastAPI, LangGraph, Large Language Models, Retrieval-Augmented Generation (RAG), and intelligent automation workflows.

Beyond my internship experience, I have built several end-to-end AI projects, including Sentinel SRE, an agentic AI platform for automated incident analysis and remediation, Orchestrix, a multi-agent orchestration platform, and LawLite, a RAG-based legal intelligence system built using LoRA fine-tuning and semantic retrieval techniques. These projects have strengthened my skills in backend development, API design, LLM applications, and scalable software engineering.

I enjoy solving complex technical problems, learning new technologies, and building solutions that create measurable business impact. I am a quick learner, adapt well to new environments, and thrive in collaborative teams where I can contribute while continuously improving my technical skills.

I am seeking an opportunity where I can apply my knowledge, contribute meaningfully to challenging projects, and continue growing as a software engineer. I would be grateful for the opportunity to discuss how my background and enthusiasm can add value to your team.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Nanda Gopal D
