SUMMARY

AI/ML Engineer specialized in Agentic AI and local-first LLM orchestration; experienced in fine-tuning models for high-stakes, high-accuracy domains like Legal and SRE using LangGraph and MCP, and building scalable platforms like cohort-based LMSs (React, Django). Proven record in delivering high-impact solutions through fine-tuning, model optimization, and designing self-healing multi-agent architectures.

PROFESSIONAL EXPERIENCE

AI Intern (Part-time), Polygnan Foundation **Jan 2026 - April 2026**

- Contributed to a cohort-based LMS (React, Django, PostgreSQL, Docker) by implementing full-stack authentication features including JWT, OTP verification, and Google SSO, improving user onboarding and system reliability.

Contributor, Hacktoberfest 2025 **Oct 2025 - Nov 2025**

- Contributed to open-source data science projects using Python and key libraries like pandas and scikit-learn. Developed and optimized machine learning models, analyzed datasets, and collaborated with cross-functional teams to deliver impactful solutions.

Contributor, Social Winter Of Code **Jan 2025 - Mar 2025**

- Contributed to 5 open-source NLP and deep learning projects using Python, PyTorch, and TensorFlow. Applied few-shot learning and optimized data pipelines, boosting model inference speed by 30% through prompt and algorithm optimization.

PROJECTS

- **Sentinal-SRE:** Built a production-grade multi-agent DevOps orchestrator utilizing LangGraph, Llama 3 and MCP for secure, 100% local-on-GPU execution, implementing cyclic self-correction loops to automate Root Cause Analysis and GitHub PR generation. it automates the DevOps lifecycle from PII-redacted log analysis to GitHub remediation reducing MTTR by over 80%
- https://github.com/NANDAGOPALNG/Sentinal-SRE
- **LawLite:** Developed an generative legal assistant and summarization system by fine-tuning LLaMA-2-7B with LoRA on 7,000+ Supreme Court judgments, integrating semantic search and ranking to enhance legal research efficiency using Python, HuggingFace, NLP and transformer architectures.
- https://github.com/NANDAGOPALNG/LawLite
- **Vision Transformer Paper Replication:** Implemented and replicated a Vision Transformer (ViT) model achieving 93% accuracy using transfer learning and rigorous evaluation demonstrating strong research, implementation, and documentation skills to NLP/LLM production research.
- https://github.com/NANDAGOPALNG/Vision_Transformer_Paper_Replication

SKILLS

- Python Programming
- GitHub
- Generative AI
- Django
- LangGraph
- Deep Learning
- Machine Learning
- Agentic AI
- Scikit Learn
- PyTorch
- FastAPI
- AWS Sagemaker
- Model Context Protocol
- NLP
- Docker

EDUCATION

Bachelor of Engineering **2023 - 2027**

Maharaja Institute Of Technology

CSE-AI&ML
